dischargecopilot

An API-first AI copilot that turns clinical notes into source-linked discharge summaries, with the clinician approving every claim.

Team Axel · Axel

Caribbean AI Summit Healthcare Hackathon · October 2026

THE PROBLEM

Residents read every progress note to write one discharge summary.

18,754 → 9,492

physicians in Puerto Rico, 2009 to 2022. Fewer doctors carry the same documentation load.

PR Health Department undersecretary, via News is my Business, May 2022

35 of 41

Puerto Rico hospitals had 30-day readmission rates above the U.S. average of 15.3%. The discharge handoff matters.

V2A Consulting analysis of CMS Hospital Compare data, December 2019

Challenge from Paul Cordero Villarrubia, resident physician

THE SOLUTION

A cited draft the resident can check, correct and approve.

01
Read all notes in parallel

02
Flag conflicts and ask the resident

03
Draft sections, every claim cited

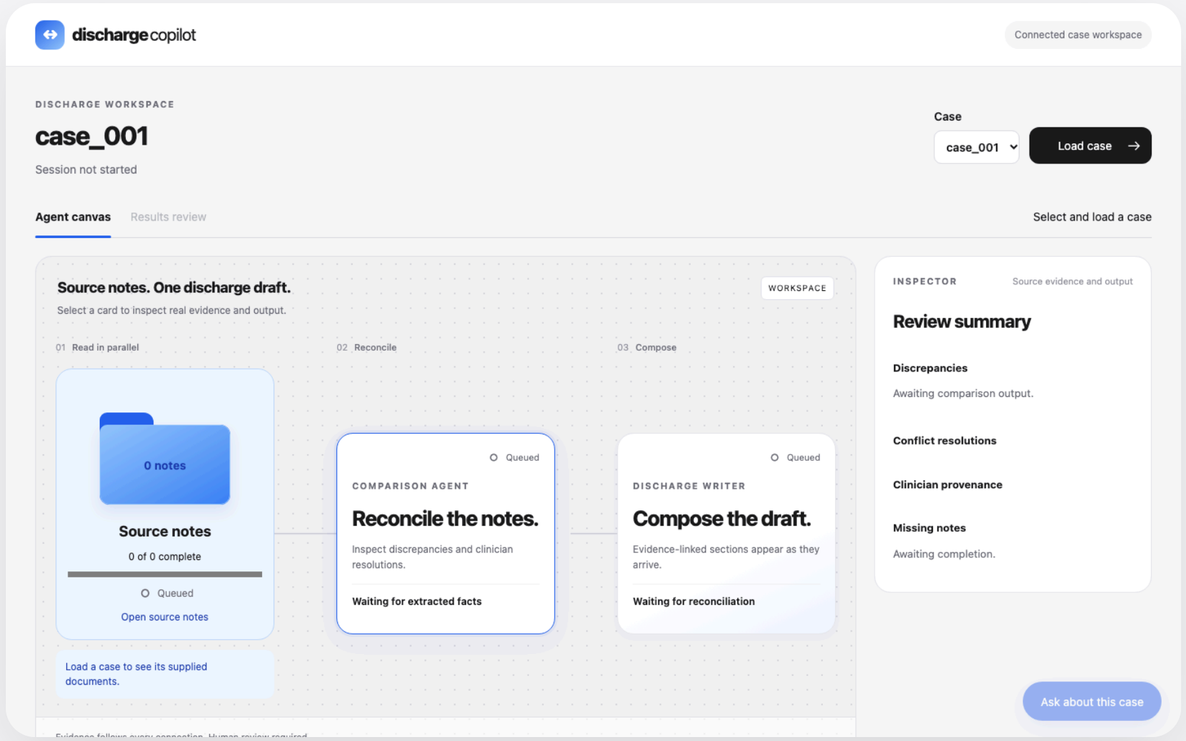

04
Ask questions, propose corrections

05
Approve and export to Word

> **It never guesses between conflicting notes, and nothing is final until a clinician approves it.**

DEMO

From synthetic notes to an approved summary.

1. Load a case
2. Resolve a conflict between notes
3. Open a citation to its source
4. Ask a question about the case
5. Correct a claim, review before/after
6. Approve and download Word

TECHNOLOGY

How it works, and what is not real yet.

How it works

- API-first FastAPI backend: the UI is one client
- LangGraph pipelines run notes and sections in parallel
- Every cited quote is checked word for word against its source
- React UI streams the draft and answers

Limitations

- Synthetic notes only, no real patient data
- No EHR integration yet
- Not HIPAA-compliant or clinically validated yet
- Voice input not in the current UI

NEXT STEPS

From prototype to pilot.

Rollout

- Pilot with a residency program, starting with the challenge sponsor's team
- Validate with clinicians on de-identified data
- HIPAA compliance and EHR integration before real use

Future features

- Batch by patient, date range, provider or insurer
- EHR plugin and white label
- Voice interaction
- Plugin store of automations for healthcare professionals
